Ingest workflows

- Standard workflow

- Digital File
- Sidecar Metadata File
- Online ingest

Default

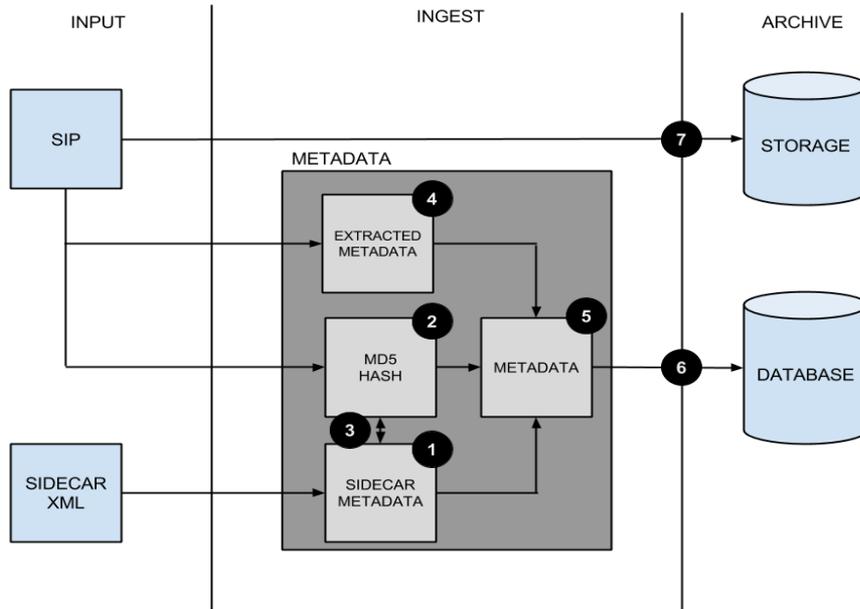

- Advanced workflow

- Archive packages
- METS Sidecar Metadata File
- Online ingest

Lots of small files

Standard Workflow: File or Archive + Sidecar

1. Parse & validate sidecar
2. Calculate MD5
3. Validate MD5
4. Extract the metadata
5. Merge the metadata
6. Create file & save metadata
7. Copy to the long term storage

Standard Workflow: Metadata

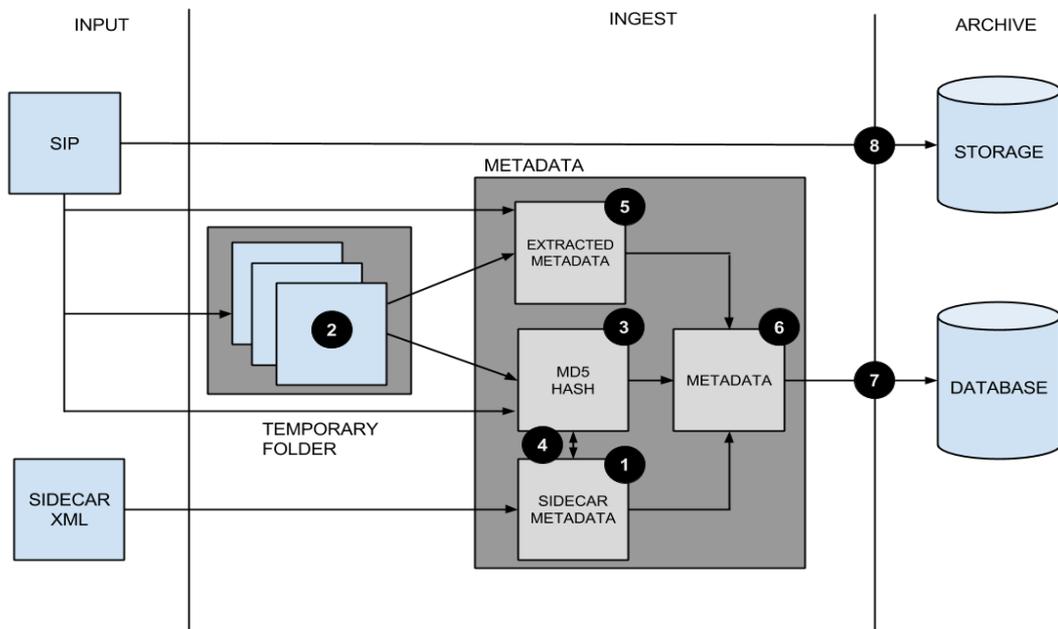

- XML format
- Metadata
 - Title (or use the original filename as title)
 - MD5 checksum
- Restriction: XML must be encoded as UTF-8

```
<?xml version="1.0" encoding="UTF-8"?>
<MediaHAVEN_external_metadata>
  <title>My title</title>
  <md5>8e0781f932b527b4cbe24ff1a076a3b5</md5>
</MediaHAVEN_external_metadata>
```

Advanced Workflow: Archive + METS

1. Parse & validate METS
2. Unpack archive to temp folder

Perform steps 3→7 for each unpacked file + archive itself

3. Calculate MD5
4. Validate MD5
5. Extract metadata
6. Merge metadata
7. Create file & save metadata
8. Copy file to long term storage

Advanced Workflow: Uses (storage strategy)

- For each file in the archive you can provide a USE in the METS:
 - **Virtual:**
 - A file is indexed and validated in the platform
 - Can be found in the search
 - NOT stored as a separate copy
 - **Preservation**
 - A file is indexed and validated in the platform
 - Can be found in the search
 - Stored as a separate copy (i.e. can be exported without exporting the full zip file)
 - **Fixity**
 - A file is validated by the platform (checksum)
 - Can not be found in the search
 - No previews are generated

Uploading: FTPS

The pair of data and sidecar file needs to be uploaded using FTPS to the LTP platform.

Server	LTP Ingest server
User	Standard Worklow: standard@<organisation> Advanced Workflow: advanced@<organisation>
Password	Sent to the local administrator of the organisation
Mode	Passive FTPS: Allow outbound FTP connections from your FTP client to LTP Ingest Server with port 21 (command) and between ports 50000 and 51000 (data) -> FW rules must be adapted!

Uploading: file name convention

The data file and the sidecar file must the same file root filename (filename without extension)

Example:

Data file	Sidecar file
KB_JB1156_1940-06-13_01.zip	KB_JB1156_1940-06-13_01.xml
FOD_NX_2000_NO_EXT	FOD_NX_2000_NO_EXT.xml

Uploading: limitation

The LTP platform has a maximum file size determined by the capacity of an LTO-7 tape medium.

!!! The maximum file size is ~ 5.5 TB. The ingest server will abort the connection if this limit is exceeded !!!

감사합니다 Natick
